## What is a token?

Token is a private key. This key proves who you are and that you have permission to be there. In admin dashboard, the "token page" is like a key maker and manager for our digital space.

When someone logs in to your website or app, they need a digital key, known as a "token." This token is a unique set of letters and numbers that identifies who they are and grants them access to certain areas or features, just like a physical key would. You can edit or delete a Token by clicking respective buttons.
